pom.xml
xml

[Edit in files](#) • [Show inline](#)

EtlProcessor.java
java

[Edit in files](#) • [Show inline](#)

docker-compose.yml
yaml

[Edit in files](#) • [Show inline](#)

This setup includes a Dockerfile for building the Java application, a pom.xml for Maven dependencies, an EtlProcessor.java for the ETL logic, and a docker-compose.yml to orchestrate Kafka, Spark, and PostgreSQL services. Adjust paths, credentials, and configurations as needed for your environment.
